

EcoTracker

EcoTracker

**Enterprise Software for
Managing the Environment**

EcoTracker adds real value to the day-to-day work routines of staff and managers, enabling offices and programs throughout an organization to easily share information. The EcoTracker **web-based platform** supports diverse business needs from project tracking, document archiving, financial accounting, billing, invoicing, laboratory data management, to tools to evaluate the risk to environmental resources. **EcoTracker's leading edge solution** effectively enables electronic transactions to link your regional offices and suppliers (environmental consultants and laboratories) with a unified platform. EcoTracker **integrates data throughout the organization** enabling managers to analyze relationships between a range of concerns including cost, laboratory and field data, manpower, environmental risk, and compliance data.

IMPLEMENTATION

EcoTracker modules can be implemented as an Internet or private Intranet application and can be integrated with other data systems. EcoInteractive partners with your organization providing the best value and quickest time frame to meet your specific implementation needs.

Our 24x7 ASP implementation option offers in depth security technology to help ensure confidentiality and control of sensitive environmental information.

FEATURES

Site Manager

Enables project managers to oversee project activities, compliance responses, party management, milestone tracking, land use controls, and risk to resource tracking.

Electronic Compliance Reporter

Easy to use, powerful web application for secure reporting of laboratory data, field measurement data, documents & reports.

Violation Reporter

Streamlines and improves the quality of violation reports and automates notifications.

Permit Manager

Robust infrastructure enables secure business-to-government transactions, review and notifications.

EcoTracker Access Net

Enables robust read only access to environmental data. Easily handles millions of hits per year. Quickly access and analyze terabytes of data.

EcoTracker GIS Net

Extensively developed technology seamlessly connects all EcoTracker modules with a GIS interface for query and data mining.

Document Archiver

Enables organizations to securely manage and immediately access a wide selection of electronic documents.

Document Coordinator

Effectively coordinates teams giving each member the capability to input and the group to reach agreement on a document by providing shared access, recording comments to a central log, and sending email notifications.

Profile Manager

Efficiently manages user relationship and association with an individual or portfolio of sites and user access rights to various datasets and reports.

Workload Tracker

Integrates data from several other modules to track activities performed, cost and labor data versus projections or commitments.

Cost Tracker

Provides easy, complete and efficient, web-driven financial management support for daily logs, invoicing, receiving of payments, cost recovery, labor and financial management reports. Efficiently interfaces with major financial systems.

Risk Manager

In depth, flexible architecture to support risk management and scientific analysis of vast quantities of multi-media environmental data.
